AgiBot G1 · "Toast bread" · never seen in training · video shown for reference only, KiRoSe reads kinematics

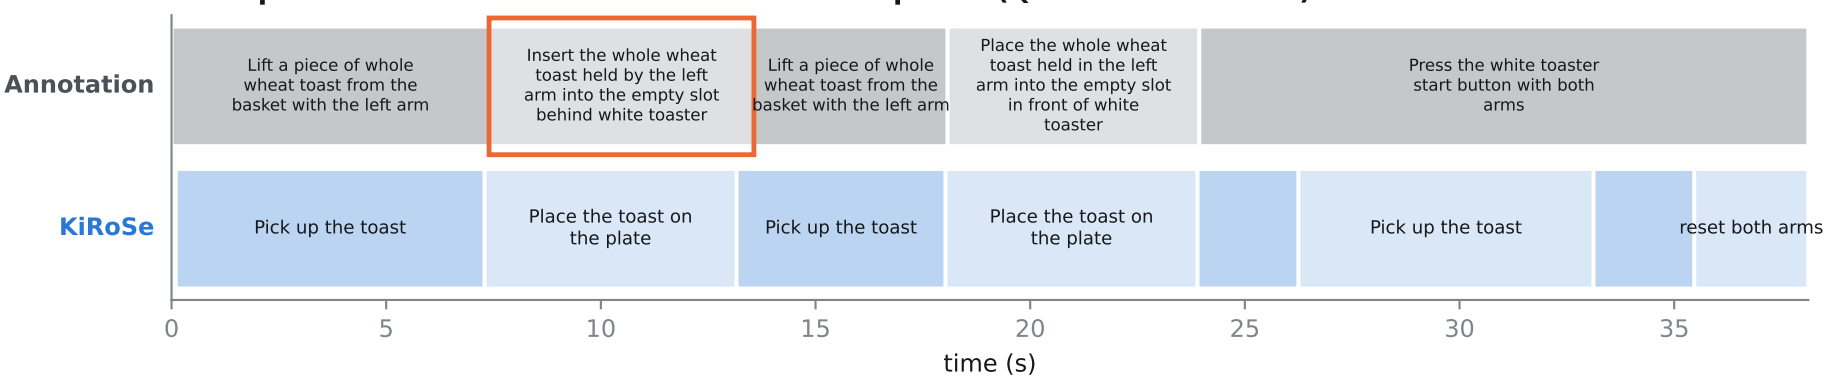

① Input: end-effector kinematics (14 channels; arm speeds shown)

② Sparse Motion Tokens: 2 per second, 77 tokens for 38 s (colour = code id)

③ Output: subtask boundaries and action descriptions (Qwen3.5-9B reader)

④ Output: dense progress on the boxed subtask (68k-parameter head on the same tokenizer)
